The main idea of the project is letting the city come inside the complex, in such a way that each citizen can easily walk to the spaces at the same level to the street and find the landscape for themselves. So it minimizes the dominance of this huge project over the context.

The main challenge in this project was the fact that the surrounding roads did not meet the capacities needed to serve the complex. And almost all hybrid large-scale projects in Tehran face this issue. Therefore, having conducted precise traffic studies, parking exits and entrances designed in both adjacent streets simultaneously.
